

Viktor Gievoi

Senior Developer PHP developer | Golang/Kotlin developer | Cloud apps

Profile

With over 14 years of experience in development, primarily focused on PHP. Passionate about TDD, DDD, distributed systems and clean architecture.

Experience

Senior PHP/Kotlin Developer - Billie, Berlin, Germany

Oct 2024

Developing an event-driven payment platform for invoice refinancing — essentially a Buy Now, Pay Later solution.

- Designed and developed a scalable, event-driven payment platform enabling invoice refinancing for B2B clients (Buy Now, Pay Later).
- Actively contributed to the decomposition of a monolithic architecture into distributed, event-based microservices.
- Implemented and maintained CI/CD pipelines to support fast and reliable delivery across multiple environments.
- Worked extensively with event streaming technologies to ensure asynchronous communication and fault-tolerant workflows.

Senior PHP Developer - Turbine Kreuzberg, Berlin, Germany

May 2022 - Oct 2024

As a Senior Developer, I was instrumental in developing and enhancing a B2B e-commerce platform using Spryker. Additionally, I integrated the platform with multiple external systems using Boomi, leveraging technologies such as PHP, Kubernetes K8S, Amazon Web Services AWS, and applied Test-Driven Development TDD practices to ensure reliable and scalable solutions.

- Developing new features, improving existing ones, and fixing bugs within a cross-functional agile environment.
- Collaborating closely with product managers, developers, and QA engineers to ensure features were developed and delivered accurately.
- Conducting thorough code reviews to maintain high standards of quality, readability, and adherence to coding practices. Preparing detailed action plans for development and testing phases.
- Engaging in pair programming sessions to share knowledge and produce higher quality code.

Solution Architect - PimPay, Moscow, Russia

Jul 2020 - Apr 2022

I was hired in the department of work with large accounts and custom development. When the project was completed I was transferred to the new department to the position of "Head of the development" with a partial role of the system architect.

- Engaged in the design and development of the company's logistics aggregator
- System design, code writing, code review, task description, and team management
- Implemented distributed request tracing and logging using EFK tools
- Redesigned and migrated the system to asynchronous communication using RabbitMQ queues, improving scalability and fault tolerance. Built a robust monitoring and alerting infrastructure, enabling faster incident detection and resolution.
- Enabled horizontal scaling that supported up to 35k concurrent users
